

Army Enterprise Integration Oversight Office Enterprise Solutions Competency Center

About AEIOO

The Secretary of the Army established AEIOO to:

- Provide Departmental policy, guidance, and direction for all Army Enterprise Resource Planning (ERP) solutions
- Ensure synchronization of business processes with operational (warfighting) processes

What is an ERP?

- An integrated suite of information technology applications and best practice business processes
 - Shares common data and practices across the enterprise
 - Manages information in a real-time environment
 - Enables configuration of applications to meet business needs based on best practices
 - Automates and integrates the enterprise's business processes

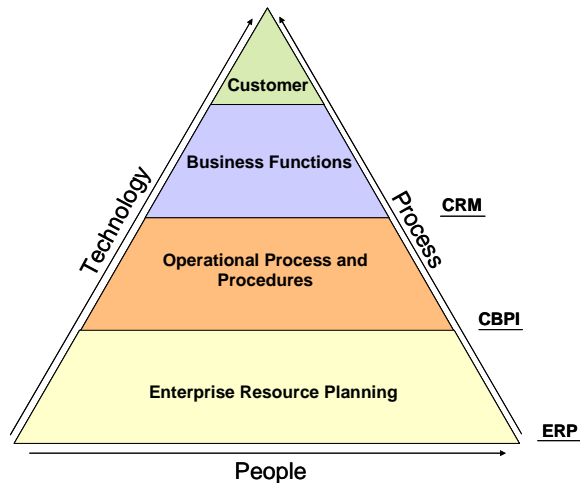

ERP Value

- Integrate processes and information systems
- Synchronize end-to-end business processes
- Consolidate and/or eliminate current systems
- Reduce portfolio complexity
- Establish an authoritative data source
- Enable real-time response to business problems
- Provide better information to improve decision-making
- Enable continuous process improvement

Scope of Transformation

What is Continuous Business Process Improvement (CBPI)?

- An approach for transforming business processes and organizations:
 - Embeds change management as part of the improvement process
 - Leverages the implementation of an ERP solution
 - Refers to both continuous improvement to existing incremental processes and larger, more radical change

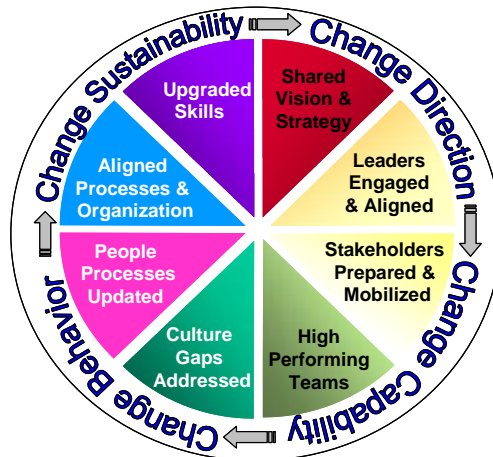

Relationship between CBPI and an ERP Solution

Although an ERP generally refers to a software solution, it also encompasses the business processes that drive system requirements and capabilities. ERP systems support and enable the transformation of enterprises through the deployment of best practices and integrated business processes. The scope of the transformation, as illustrated in the Scope of Transformation graphic is focused on all aspects of the enterprise to include: people, processes, and technology

Relevance to the Army

The new strategic context for an Army at War is shaping how we will fight and win in the future. To accomplish its mission the Army is transforming to support continuous operations focused on enabling the Warfighter. From a Transformation perspective, this includes the support processes, organizations, and systems that support the Warfighter. ERP solutions support an aspect of the Army Transformation. However, change management impacts all aspects of the transformation effort including people, process and technology.

Change management is the backbone of any transformation effort. The interrelated activities that support any change initiative include planning, leadership and stakeholder management, communications, organizational alignment and learning.

Transformation Principles

Lean

Key Concepts: Remove waste and maximizing process velocity
Focus: Process flow and cycle time

Application guidelines:

- Identify value
- Identify value stream
- Flow
- Pull
- Perfection

Six Sigma

Key Concepts: Reduce variations and elimination of defects

Focus: Voice of Customer

Application guidelines:

- Define
- Measure
- Analyze
- Improve
- Control

Lean Six Sigma

Key benefits:

- Six Sigma statistical control
- Lean focus on improving process speed
- Six Sigma Focus on customer needs
